JACKING & HOISTING

FRAME & UNDERBODY

The following illustration(s) indicate areas (parts) of the underbody and frame which may be used to raise and support the vehicle, using either floor jack or hoist. These points are indicated by shaded areas on the frame. See Fig. 1.

OUTERBODY

Those points designated on the outline of the body were specifically designed to facilitate the use of the vehicle's own jack. These jacking points are indicated by circular dots on the outline of the body. See Fig. 1. If floor jack or hoist is employed, extreme care should be exercised to avoid damaging the outer body shell.
