ON–VEHICLE INSPECTION (3S–GTE)

SPARK TEST

CHECK THAT SPARK OCCURS
(a) Disconnect the high–tension cord from the distributor.
(See page IG–11)
(b) Hold the end about 12.5 mm (0.50 in.) from the body of car.
(c) Check if spark occurs while engine is being cranked.
HINT: To minimize the amount of fuel injected into the cylinders during this test, crank the engine for no more than 1 – 2 seconds at a time.
If the spark does not occur, perform the test as follows:

</table>

BAD

Connect securely.

BAD

Replace the cord (s).

BAD

Check wiring between ignition switch to ignition coil and igniter.

BAD

Replace the ignition coil.

BAD

Replace the distributor housing assembly.

BAD

Replace the distributor housing assembly.

BAD

Check wiring between ECM, distributor and igniter, and then try another ECM.

BAD

TRY ANOTHER IGNITER
INSPECTION OF HIGH–TENSION CORDS

1. REMOVE CHARGE AIR COOLER
   (See steps 13 to 15 on pages TC–9 and 10)

2. DISCONNECT HIGH–TENSION CORDS FROM SPARK PLUGS
   Disconnect the high–tension cords at the rubber boot.
   DO NOT pull on the cords.
   NOTICE: Pulling on or bending the cords may damage the conductor inside.

3. DISCONNECT HIGH–TENSION CORD FROM IGNITION COIL

4. REMOVE DISTRIBUTOR CAP WITHOUT DISCONNECTING HIGH–TENSION CORDS

5. INSPECT HIGH–TENSION CORD RESISTANCE
   Using an ohmmeter, measure the resistance without disconnecting the distributor cap.
   Maximum resistance: 25 kΩ per cord
   If the resistance is greater than maximum, check the terminals. If necessary, replace the high–tension cord and/ or distributor cap.

6. REINSTALL DISTRIBUTOR CAP

7. RECONNECT HIGH–TENSION CORD TO IGNITION COIL

8. RECONNECT HIGH–TENSION CORDS TO SPARK PLUGS

9. REINSTALL CHARGE AIR COOLER
   (See steps 11 to 15 on page TC–17)

INSPECTION OF SPARK PLUGS

NOTICE:

- Never use a wire brush for cleaning.
- Never attempt to adjust the electrode gap on used spark plug.
- Spark plug should be replaced every 100,000 km (60,000 miles).

1. REMOVE CHARGE AIR COOLER
   (See steps 13 to 15 on pages TC–9 and 10)

2. DISCONNECT HIGH–TENSION CORDS FROM SPARK PLUGS
3. INSPECT ELECTRODE
Using a megger (insulation resistance meter), measure the insulation resistance.

**Standard correct insulation resistance:**
10 MΩ or more
If the resistance is less than specified, proceed to step 4.

**HINT:** If a megger is not available, the following simple method of inspection provides fairly accurate results.

**(Simple Method)**
(a) Quickly race the engine to 4,000 rpm five times.
(b) Remove the spark plug. (See step 4)
(c) Visually check the spark plug.
If the electrode is dry ... Okay
If the electrode is wet ... Proceed to step 5
(d) Reinstall the spark plug.
(See step 8 on page IG–13)

4. REMOVE SPARK PLUGS
Using a 16 mm plug wrench, remove the spark plug.

5. VISUALLY INSPECT SPARK PLUGS
Check the spark plug for thread damage and insulator damage.
If abnormal, replace the spark plug.

**Recommended spark plug:**
ND PK20R8
NGK BKR6EP8

6. INSPECT ELECTRODE CAP
**Maximum electrode gap:** 1.0 mm (0.39 in.)
If the gap is greater than maximum, replace the spark plug.

**Correct electrode gap of new spark plug:**
0.8 mm (0.31 in.)

**NOTICE:** If adjusting the gap of a new spark plug, bend only the base of the ground electrode. Do not touch the tip. Never attempt to adjust the gap on the used plug.
INSPECTION OF IGNITION COIL

1. DISCONNECT IGNITION COIL CONNECTOR
2. DISCONNECT HIGH–TENSION CORD
3. INSPECT PRIMARY COIL RESISTANCE
   Using an ohmmeter, measure the resistance between positive (+) and negative (–) terminals.
   Primary coil resistance (Cold): 0.3 ~ 0.6 Ω at –10 ~ +40°C (14 ~ 104°F)
   If the resistance is not as specified, replace the ignition coil.
4. INSPECT SECONDARY COIL RESISTANCE
   Using an ohmmeter, measure the resistance between positive (+) and high–tension terminals.
   Secondary coil resistance (Cold): 9 ~ 15 kΩ at –10 ~ +40°C (14 ~ 104°F)
   If the resistance is not as specified, replace the ignition coil.
5. RECONNECT HIGH–TENSION CORD
6. RECONNECT IGNITION COIL CONNECTOR

INSPECTION OF DISTRIBUTOR

1. DISCONNECT DISTRIBUTOR CONNECTOR
2. REMOVE DISTRIBUTOR CAP
3. REMOVE ROTOR

7. CLEAN SPARK PLUGS
   If the electrode has traces of wet carbon, allow it to dry and then clean with a spark plug cleaner.
   Air pressure: Below 588 kPa (6 kgf/cm², 85 psi)
   Duration: 20 seconds or less
   HINT: If there are traces of oil, remove it with gasoline before using the spark plug cleaner.

8. INSTALL SPARK PLUGS
   Using a 16 mm plug wrench, install the spark plug.
   Torque: 18 N–m (180 kgf–cm,13 ft–lbf)

9. RECONNECT HIGH–TENSION CORDS TO SPARK PLUGS

10. REINSTALL CHARGE AIR COOLER
    (See steps 11 to 13 on page TC–17)
4. INSPECT AIR GAP
Using SST (G1 and G2 pickups) and a thickness gauge (NE pickup), measure the air gap between the signal rotor and pickup coil projection.
SST 09240–00020 for G1 and G2 pickups
Air gap: 0.2 – 0.4 mm (0.008 – 0.016 in.)
If the air gap is not as specified, replace the distributor housing assembly.

5. INSPECT SIGNAL GENERATOR (PICKUP COIL) RESISTANCE
Using an ohmmeter, measure the resistance between terminals.
Pickup coil resistance (Cold):
G1 and G (–) 125 ~ 190Ω at –10 ~ +40°C (14 ~ 104°F)
G2 and G (–) 125 ~ 190Ω at –10 ~ +40°C (14 ~ 104°F)
NE and G (–) 155 ~ 240Ω at –10 ~ +40°C (14 ~ 104°F)
If the resistance is not as specified, replace the distributor housing assembly.

6. REINSTALL ROTOR
7. REINSTALL DISTRIBUTOR CAP
8. RECONNECT DISTRIBUTOR CONNECTOR

INSPECTION OF IGNITER
(See procedure Spark Test on page IG–10)
